

First-time 2FA Setup via a Personal Computer

Preliminary Actions

You need to install a *program* on your personal computer which will

- store the **secret key** that the IL authentication system will share with you
- calculate TOTP passcodes using the **secret key** as a seed

We advise Free Softwares such as [KeePassXC](#) (multiplatform with GUI) or the [OATH Toolkit](#) (GNU/Linux terminal), but you are free to choose any programs that implement the open OTP standards.

Setup

Step 1

Navigate to any of the Lorentz Institute SSO web applications, such [Account Services](#), [Remote Workspace](#), etc.

You will be redirected automatically to the Lorentz Institute Identity Provider login page as in **Figure 1**.

Figure 1: Identity Provider login page

Step 2

Enter your IL credentials to sign in. Upon successful login, you will be redirected to a page containing a QR code. Click on "Unable to Scan?" to display your shared **secret key** and the other parameters to input in your OTP program (Figure 2).

Note the secret key, the algorithm, the number of digits, and the time interval. You will need them in Step 3.

Lorentz Institute Intranet

You need to set up Mobile Authenticator to deactivate your account.

Install one of the following applications on your mobile:

- FreeOTP
- Google Authenticator

Open the application and scan the barcode:

[Unlink to user?](#)

Enter the one-time code provided by the application and click Submit to finish the setup.

Provide a Device Name to help you manage your OTP devices.

Submit

Lorentz Institute Intranet

You need to set up Mobile Authenticator to activate your account.

- Install one of the following applications on your mobile:
 - FreeOTP
 - Google Authenticator
- Open the application and enter the key:

```
otpkey=HUSKE-DSBAC-ENTWIS-LLVCR-UNION-HFHSO-SMTY
```

[Scan barcode?](#)
- Use the following configuration values if the application allows setting them:
 - Type: Time-based
 - Algorithm: SHA1
 - Digits: 5
 - Interval: 30
- Enter the one-time code provided by the application and click Submit to finish the setup.
 Provide a Device Name to help you manage your OTP devices.

Step 3

Open KeePassXC (installed on all IL workstations), create a new passwords database if you do not want to use an existing one and click on Entries → TOTP → Set Up TOTP
