

Meetnet Storage Server

The data01 storage server (22 TB) and its backup are at their end of life and a new environment (83TB) is available. We will call it and its backup device data02 for now. Data01 also contained an additional share called data3 (holding the pi-folders) which was not backed up. Data02 will completely replace Data01 including the data3-share.

For more information on this transition and about the new server look at:

- [Transition howto](#)
- [PI Structure](#)
- [The hardware](#)
- [Connecting to the storage server](#)
