

First Time Access

With a Personal Computer

If you do not have a Smart Phone, or if you do not want to use a Smart Phone, you can use alternative programs to provide the passcode needed for 2FA. A few of these programs are:

- KeepassXC (keepassxc.org GUI) or,
- oathtool ([oath-toolkit](https://github.com/jkorneel/oath-toolkit) GNU/Linux cmd line) or,
- OTP Manager ([id928941247](https://www.id928941247.com) MacOS)

or any softwares that implement OTP standards.

So after installing one or more of the above programs you can proceed to go to a web page that helps you setup 2FA. This page is located in our [Self Service area](#). When you access that page you are redirected to the new Observatory Identity Provider and presented with a login window.

Leiden Observatory Identity Provider

You need to set up Mobile Authenticator to activate your account.

1. Install one of the following applications on your mobile:
 - FreeOTP
 - Google Authenticator
2. Open the application and scan the barcode:
3. Enter the one-time code provided by the application and click Submit to finish the setup.

Provide a Device Name to help you manage your OTP device.

(Six digit) One-time passcode *

Device Name

Submit

After entering your account credentials you are present a QR code on the next page. Your computer programs are not equipped to scan QR codes, so you need to 'see' the secret key. For this you click the link **Unable to scan?**

Leiden Observatory Identity Provider

You need to set up Mobile Authenticator to activate your account.

1. Install one of the following applications on your mobile:
 - FreeOTP
 - Google Authenticator
2. Open the application and enter the key:

PR09 UMR8 5UQX MONY ORIE 04SF 09XD CT1U

[Show barcode?](#)
3. Use the following configuration values if the application allows setting them:
 - Time: 30 seconds
 - Algorithm: SHA1
 - Length: 6
 - Interval: 30
4. Enter the one-time code provided by the application and click Submit to finish the setup.

Provide a Device Name to help you manage your OTP device.

One-time code *

Device Name

Submit

After clicking the link you will be presented a window that shows you the secret key in clear text. Copy this key and save it in a place where your program can use it. Then run this program to obtain a passcode (a six digit number). Note that the passcodes have a lifespan of 30 seconds, so you might need to regenerate a new passcode if the 30 sec. timeslot has passed.

Since you are now setting up 2FA for the first time, you may also type in a name for the device from which you are getting the passcodes. It is merely a tag for later use. Having filled in all required fields, you continue to **Submit** the next form.

Now follow the steps from section [Remaining Setup](#)
