

# First Time Access

## With a Personal Computer

If you do not have a Smart Phone, or if you do not want to use a Smart Phone, you can use alternative programs to provide the passcode needed for 2FA. A few of these programs are:

- KeepassXC (<https://keepassxc.org> GUI) or,
- oathtool (<https://www.nongnu.org/oath-toolkit/> GNU/Linux cmd line) or,
- OTP Manager (<https://apps.apple.com/us/app/otp-manager/id928941247> MacOS)
- WinOTP for Windows

or any softwares that implements OTP standards.

Figure 1: 2FA Login screen (Click image to enlarge).

So after installing one or more of the above programs you can proceed to go to a web page that helps you setup 2FA. This page is located in our [Self Service area](#). When you access that page you are redirected to the new Observatory Identity Provider and presented with a login window.

Leiden Observatory Identity Provider

You need to set up Mobile Authenticator to activate your account.

1. Install one of the following applications on your mobile:
  - a. FreeOTP
  - b. Google Authenticator
2. Open the application and scan the barcode:  
[Unable to scan?](#)
3. Enter the one-time code provided by the application and click Submit to finish the setup.

Provide a Device Name to help you manage your OTP device.

(Six digit) One-time passcode \*

Device Name

**Submit**

Figure 2: 2FA setup secret key form QR code version (Click image to enlarge).

After entering your account credentials you are presented a QR code on the next page. Your computer programs are not equipped to scan QR codes, so you need to 'see' the secret key. For this you click the link [Unable to scan?](#)

Leiden Observatory Identity Provider

You need to set up Mobile Authentication to activate your account.

1. Install one of the following applications on your mobile:
  - FreeOTP
  - Google Authenticator
2. Open the application and enter the key:  
 PR8W UMBS 5XQJL M8KY 0RIE 04EN 09XD CF1U  
[Scan QR code?](#)
3. Use the following configuration values if the application allows setting them:
  - Token: FreeOTP
  - Algorithm: SHA1
  - Secret: 1234567890
4. Enter the one-time code provided by the application and click Submit to finish the setup.  
 Provide a Device Name to help you manage your OTP device.
 

One-time code \*  
  
 Device Name

Figure 3: 2FA setup secret key form clear text version (Click image to enlarge).

After clicking the link you will be presented a window that shows you the secret key in clear text. Copy this key and save it in a place where your program can use it. Then run this program to obtain a passcode (a six digit number). Transfer this passcode to the form. Note that the passcodes have a lifespan of 30 seconds, so you might need to regenerate a new passcode if the 30 sec. timeslot has passed.

Since you are now setting up 2FA for the first time, you may also type in a name for the device from which you are getting the passcodes. It is merely a tag for later use. Having filled in all required fields, you continue to Submit the next form.

Now follow the steps from section [Remaining Setup](#)
